

Project phase03 - Connecting to a database

Objectives

- Create a MySQL database
- Write queries using PHPMyAdmin

Getting Started

Read chapter 14 in your textbook.

Note: For the remainder of the term I will write the instructions assuming that your `sas` folder is located inside your `web182` folder as in `web182/sas`. It is fine if your `sas` folder is outside of your `web182` folder.

- Create a new folder called `web182/sas/prj03-ch14`
- Move the `chapter14` coursework files into your new folder.

No Git!

There is no need to use git for this phase.

Complete the following exercises

Complete all of the Fixit and Modify exercises.

Complete the coding exercises 1 - 6; 10

Submit your work

Zip up your `prj03-ch14` folder and name it `prj03-ch14-yourlastname.zip`

Do not include the the database creation code in your file. I will run a copy of it on my computer to check your code.
